## HOW TO USE GUIDE

Technology has become the backbone of every organisation, so it stands to reason then that businesses choosing the right software and systems are more likely to gain a useful edge against their competitors. As trusted business advisers, Institute members are increasingly likely to be asked to recommend software and systems suited to a particular business application.

We have put this *Business Software and Technology Guide* together to assist you in this area. This guide is made up of two

locator tables. By using these tables you will be able to create a shortlist of software applications that suit your requirements.

- > Step 1 – use the software function table to locate those software packages with the feature(s) you require.
- > Step 2 – use the industry & platform locator table to locate software packages that cater for the particular industry/ profession you are implementing for.
- > Step 3 – evaluation. Now you have a shortlist of software packages, enabling you to evaluate which ones are best suited to the task. All of the software

providers can be found on the internet, and you'll see several of them featured within this publication.

While every effort has been made to ensure the accuracy of the content of the *Business Software and Technology Guide*, claims made by suppliers cannot be tested in a live environment prior to going to print, therefore, any questions relating to these software packages must be raised with the individual suppliers. The inclusion of suppliers in this guide is not an endorsement by the Institute of any product contained.
